Smartphone Link Display Audio

Mitsubishi's Smartphone Link Display Audio (SDA) system for both Android Auto^{*} and Apple CarPlay[^] allows users of either Android smartphones or iPhones to connect to the SDA display using a USB cable.

The system is designed to allow the driver, either by using the touchscreen or by voice control, to safely and simply:

- Access navigation and other apps on their smartphone
- Make and receive phone calls
- Send and receive text messages
- Listen to music

The system also eliminates the need for regular map updates to the car's navigation system by accessing the latest map information from the smartphone.

Plug in, unlock, and go!

- ① Menu (Ipod)
- ② Switch to Home screen
- ③ Switch to Android Auto/CarPlay
- ④ Back to Home screen
- ⑤ Volume up
- ⑥ Page scroll (swipe to next page)
- ⑦ Volume down
- ⑧ Power ON/OFF

*Android and Android Auto are trademarks of Google Inc. registered in the United States and other countries. ^Apple CarPlay, iPhone, are trademarks of Apple Inc. registered in the United States and other countries.

Apple CarPlay

Available on selected cars, CarPlay is a smarter, safer way to use your iPhone in the car. CarPlay takes the things you want to do with your iPhone while driving and puts them right there on your car's built-in display.

You can get directions, make calls, send and receive messages, and listen to music, all in a way that allows you to stay focused on the road. Just plug in your compatible iPhone and go!

Apple CarPlay

Apple Maps

Complete with turn-by-turn directions, traffic conditions and estimated travel time.

Apple Maps can also predict where the user is most likely to want to go using addresses from their email, text messages, contacts and calendar.

Music

All your Music is beautifully arranged. Access your songs, artists, playlists and iTunes Radio using your vehicles built-in controls.

Or just tell Siri what you'd like to listen to.

Car play will also support additional audio apps that you've downloaded to your iPhone for enjoying podcasts, music and radio.

Phone

The road is calling. Make calls, return missed calls and listen to voicemail.

Siri helps do all these things.

Siri Voice Recognition

Siri is part of Apple Incorporated iOS which works as an intelligent personal assistant and knowledge navigator.

Siri uses a natural language user interface to answer questions, make recommendations and perform voice command actions.

Voice Command "Hey Siri"

Messages

Reading and writing is now listening and dictating. Siri can send, read and reply to your text messages for you so you'll never have to look at your phone while driving.

Other Apps

Bring more apps along for the ride. CarPlay supports other apps on your phone*.

Additional apps will be made CarPlay compatible and made available over time.

Current apps available include Podcasts, Audiobooks, Spotify, Stitcher and iHeartRadio.

*Some apps may not be available with CarPlay in Australia.

Connecting your iPhone to Apple CarPlay

Before attempting any of the procedures below, ensure that your vehicle is stationary.

Step 1:

Check that you have all of the right equipment; a compatible iPhone with iOS 8 or above, and a genuine Apple Lightning to USB cable.

Step 2:

Check that the following services are set to 'ON' on your iPhone:

Location services: Settings > Privacy > Location Services > Location Services switch ON

Siri Enabled: Settings > General > Siri > Siri switch ON

Step 3:

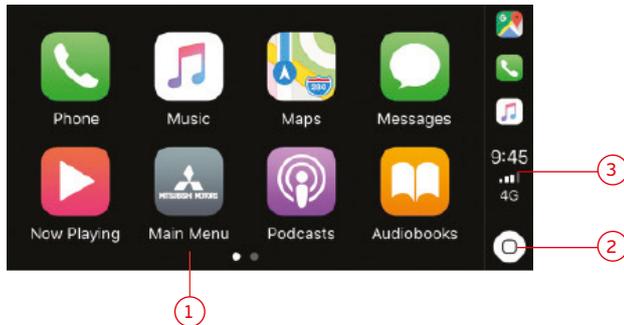

Connecting to the SDA is then as simple as plugging your handset into the vehicle's USB port via the genuine Apple Lightning cable.

When connecting your iPhone to the SDA, you will need to unlock the iPhone screen to access the system.

Accessing Apple CarPlay

To launch Apple CarPlay, touch the Apple CarPlay icon on the SDA once you have connected your iPhone.

- 1 Back to SDA home screen
- 2 Home button
Short press: Shortcut to CarPlay home
Long press: Enables Siri
- 3 Clock & signal strength

Apple Lightning to USB cable

Introducing Android Auto

Android Auto is an app that integrates with your car to make it easier for you to use some of the main features of your Android phone while driving.

You can control navigation, music, and your phone's dialler from your car's digital display so you can stay focused on the road.

Google Maps

Google Maps will lead the way. It's easy to get where you're going with voice-guided navigation, live traffic information, lane guidance and more.

Google Play Music

With Android Auto you can access Google Play Music. With on-demand access to 30 million songs, Google Play Music allows you to stream music on the road and anywhere else you want to listen.

Phone

You can make phone calls with voice commands while keeping your hands on the wheel.

There's no need to touch your phone.

Google Voice Search

Make phone calls or send and receive messages with voice commands while keeping your hands on the wheel.

Voice command "Ok Google"

Messages

You can send and receive messages while keeping your hands on the wheel. There's no need to touch your phone

Other Apps

Android Auto makes it easy to access your favourite apps and content in the vehicle*.

For more applicable apps for Android Auto go to g.co/androidauto

*Some apps may not be available with Android Auto in Australia

Connecting your Handset to Android Auto

Before attempting any of the procedures below, ensure that your vehicle is stationary.

Step 1

Check that you have all of the right equipment; a compatible handset with Android Version 5 (Lollipop) or above, and a Micro USB to USB data cable.

Step 2

Check that the following services are set to 'ON' on your iPhone:

Location services: Settings > Location > Location switch ON

Step 3

Download the Android Auto app to your phone on Google Play or simply plug your phone into a compatible car and you'll be prompted to download the app.

Before using Android Auto, make sure that your Android phone has a data plan.

Most features of Android Auto require data usage so it's important that you're familiar with your plan and its data limits to avoid unexpected charges from your mobile provider.

Connect your handset

You'll need a USB cable to connect your phone to the car. Your phone may also prompt you to update apps like Google Maps the first time you connect.

Step 1

Unlock your phone's screen.

Step 2

Connect one end of the USB cable to your phone and the other to your compatible car's USB port.

Step 3

Review the Terms & Conditions on your phone (only required the first time you use the app).

Allow access to Bluetooth and Notifications

Android Auto uses Bluetooth to send and receive phone calls. It uses notifications to show you things like turn-by-turn navigation, calendar events, incoming calls and messages, and your music on your car's screen.

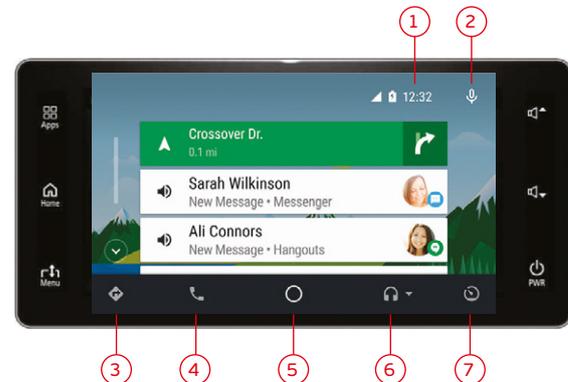

Start Android Auto

To activate Android Auto, touch the Android Auto icon on the vehicle's screen.

Accessing Android Auto

To activate Android Auto, touch the Android Auto icon on the SDA once you have connected your handset.

- 1 Time, phone battery and signal strength
- 2 Google Voice control
- 3 Navigation
- 4 Phone
- 5 Back to Android Auto home screen
- 6 Music
- 7 Other apps and features

Compatible Handsets

To ensure that you are able to easily connect your handset to the SDA, please check the compatibility of your handset and the software.

| | Handset | Software | How to check OS Version |
|--|---|-----------------------|--|
|  Apple CarPlay | iPhone 5 through to iPhone X | iOS 8 or later | Settings > General > About > Version |
|  Android Auto | All handsets compatible with Android version 5 (Lollipop) or later. | 5.0 Lollipop or later | Setting > About Device > Software info |

Google Maps and Waze

Previously, Google Maps was only compatible with Android Auto, and the only map system available to Apple CarPlay users was Apple Maps. However, from September 2018, Apple's iOS 12 update now allows CarPlay to support both Google Maps and Waze.

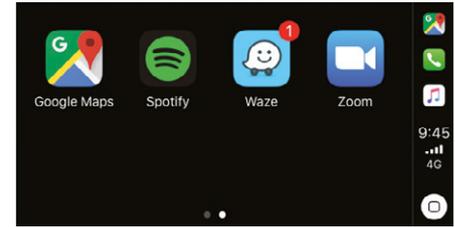

Access to these map applications may provide additional benefits to our customers, including the following key features:

Google Maps

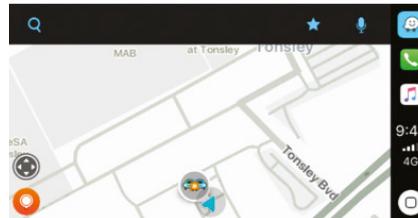

- Comprehensive map database with relevant and timely updates
- Ability to download maps into your handset for use in areas where data is not accessible
- Traffic density indications (via colour coding)
- Satellite view

Waze

- Community based traffic navigation
- Real-time help from other drivers
- Time/energy efficient routes, avoiding heavy traffic or incidents
- Speed indicators with overspeed warnings (where available)

Google Maps Satellite View (CarPlay)

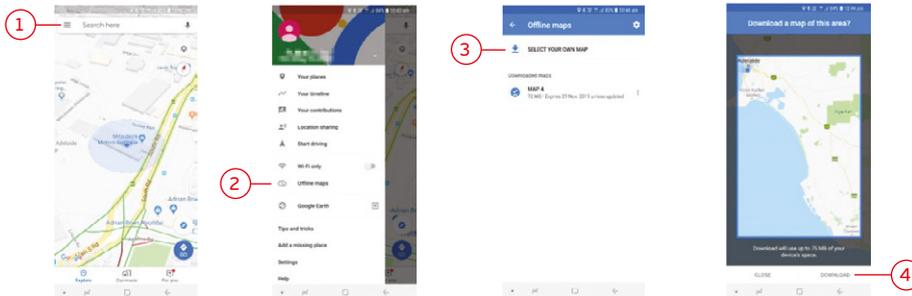

Waze (CarPlay)

Google Maps

Some competitor audio units currently in the market support a satellite navigation system with integrated (or stored) maps. The benefit of this format is that the unit can provide directions without the need for a data enable handset to be connected to provide the map information. However, having the maps stored in the unit often results in out-of-date map data which may lead to a frustrated driving experience when directions are incorrect, or roads and highways are added or changed. The benefit of 'live' map data is that your map directions will always be up-to-date, and may also include information such as live traffic updates, incident alerts and hazard avoidance.

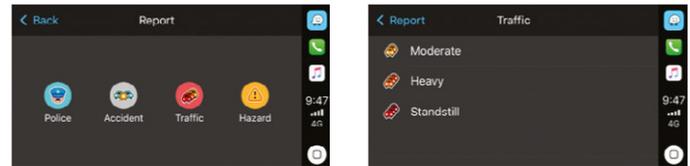

Our SDA unit supports Google Maps via CarPlay and Android Auto. A benefit with Google Maps is it allows for map files to be downloaded and stored in to your handset. This option the can provide the user with access to maps without data being active or in locations where data is not available.

Steps 1-4 below show the 'offline maps' process:

Waze

Waze operates as a conventional satellite navigation system which requires access to mobile data to show accurate road systems as well as live traffic updates and incident alerts. A key benefit of Waze is that it also allows for users (or Wazers) to input information such as congested traffic, road accidents and other hazards which in turn is then visible to other nearby Wazers. This provides real time driving information to assist users to avoid these types of traffic issues, and may in turn provide a better driving experience while potentially reducing time and energy.

Waze report screens (CarPlay)

Frequently Asked Questions

Can I use my phone for other actions while Smartphone Link Display Audio is running?

While Android Auto is running, the screen on your phone will be locked. If you need to use your phone for an action you can't control through Android Auto, you will need to unplug the phone from the USB cable. For your safety, do not use your phone for actions you can't control through Android Auto while you're driving.

Can I use the navigation feature when I am outside of my carrier's mobile data coverage area?

Some map data is buffered, so as long as the buffered map data is available, you will be able to continue using the navigation feature. While outside of the coverage area, updated map data and new or recalculated routes will be unavailable.

What SDA features are available when using a phone which does not support the latest Android or iOS operating systems?

Hands-free phone calls and music via Bluetooth, playing contents stored in an iPod, or USB/HDMI/AUX are all possible with a compatible phone.

What issues may arise when my phone reception is poor?

As voice recognition is processed by a Google/Apple server, voice recognition will not work if your mobile reception is poor. In addition, when the signal is lost, map data for navigation will not be downloaded.

How many devices can be connected via Bluetooth at the same time?

The system can pair with up to 5 devices.

How do I send a text?

Android Auto

1. Press and hold your car's voice command button for 1-2 seconds or select the microphone on the display.
2. Say "text" or "send a text to" and then a contact name or phone number. For example: "Text <name>" or "Send a text to <phone number>"
3. Android Auto will ask you to say your message.
4. Android Auto will then repeat your message and confirm that you'd like to send it. If you want to send the message say "send." If you want to cancel the message just say "cancel."

Note: You can also say "send it" or "yes" to send the message or "change the message" to correct it.

Apple Car Play

1. Press and hold your car's voice command button or the Home button on the display for 1-2 seconds.
2. Say "text" or "send a text to" and then a contact name or phone number. For example: "Text <name>" or "Send a text to <phone number>"
3. Siri will ask you to say your message.
4. Siri will then repeat your message and confirm that you'd like to send it. If you want to send the message, select or say "continue". If you want to cancel the message just select or say "cancel."

Frequently Asked Questions (cont)

How can I read a received text?

Android Auto

When you receive a text message, it will appear as a notification on the home screen, or as a temporary notification at the top of your screen if you're in an app.

To hear your text spoken through the car's speakers, select the notification.

If you dismissed the text notification, you can see the notification on the Home screen.

CarPlay

When you receive a text message it'll appear as a notification at the top of your screen and as a temporary notification and on the Messages icon on the home screen.

Select the notification or messages icon and Siri will read the message out to you."

Is it possible to install SDA in other vehicle's dashboard?

No. At this time, the SDA unit is only available as a factory fitted feature.

Does SDA include navigation feature?

Although SDA is not equipped with its own navigation system, you can use the navigation system running on CarPlay or Android Auto when connected to your smartphone. The AndroidAuto and CarPlay navigation systems are easy to use compared with traditional navigation systems and portable navigation devices, and map data and traffic information is constantly updated.

Does SDA have a CD drive? Can I listen music from a CD?

As there is no CD drive in the SDA unit, you will not be able to play music from a CD. You will be able to play music stored in your smartphone via the streaming music feature through AndroidAuto or CarPlay. You can also play music using an iPod, USB memory stick or a Bluetooth audio device.

How much data is needed to listen to streamed music for 30 minutes?

It depends on the selected quality or sampling rate of the music file. A music streaming service at low quality will typically stream at a rate of 64 kbit/s. Listening to 30 minutes of online audio at this quality would use 14.4Mb of data. Listening at higher quality levels such as 320 kbit/s would increase the amount of data used in 30 minutes to 57.6Mb. Check your mobile data plan to see how much data allowance you have and clarify the costs if excess data occurs.

Does Mitsubishi Motors collect any information through AA/CP?

No. Mitsubishi Motors does not obtain any information through AndroidAuto or CarPlay.

Additional apps will be made CarPlay compatible and made available over time.

Current apps available include Podcasts, Audiobooks, Spotify, Stitcher and iHeartRadio.

*Some apps may not be available with CarPlay in Australia.

Connecting an iPhone to Apple CarPlay

Step 1

Check that you have all of the right equipment; a compatible iPhone with iOS 8 or above, and a genuine Apple Lightning to USB cable.

Step 2

Check that the following services are set to 'ON' on your iPhone:

Location services: Settings > Privacy > Location Services; Location Services switch ON.

Siri Enabled: Settings > General > Siri; Siri switch ON.

Step 3

Connecting to the SDA is then as simple as plugging your handset into the vehicle's USB port via the genuine Apple Lightning cable.

When connecting your iPhone to the SDA, you will need to unlock the iPhone screen to access the system.

Before attempting any of these procedures, ensure that your vehicle is stationary.

Note: Compatible Apple iPhones connected to the SDA unit via Bluetooth instead of the cable connection will be able to make and receive phone calls, stream music, and even respond to several Siri commands, however, CarPlay functionality and apps such as Maps will not operate.

- Use a cable certified by Apple Inc., otherwise CarPlay functions may not operate correctly.
- A Bluetooth connection is cancelled when connecting to Apple CarPlay via a compatible cable.
- If two iPhones compatible with Apple CarPlay are connected at the same time, the first connected iPhone will be recognised by Apple CarPlay.
- If an Android phone compatible with Android Auto is connected to the SDA unit, Apple CarPlay cannot be used, even if the iPhone compatible with Apple CarPlay is connected.

Accessing Apple CarPlay

To launch Apple CarPlay, touch the Apple CarPlay icon on the SDA once you have connected your iPhone.

- 1 Back to SDA home screen
- 2 Home button
Short press: Shortcut to CarPlay home
Long press: Enables Siri
- 3 Clock & signal strength
- 4 Previous action shortcuts

Android Auto

Android Auto is an app that integrates with your car to make it easier for you to use some of the main features of your Android phone while driving.

You can control navigation, music, and your phone's dialler from your car's digital display so you can stay focused on the road.

There's no need to touch your phone.

Google Voice Search

Make phone calls or send and receive messages with voice commands while keeping your hands on the wheel.

Voice command "Ok Google"

Messages

You can send and receive messages while keeping your hands on the wheel. There's no need to touch your phone

Other Apps

Android Auto makes it easy to access your favourite apps and content in the vehicle*.

For more applicable apps for Android Auto go to g.co/androidauto

Connect a Compatible Handset to Android Auto

Step 1

Check that you have all of the right equipment; a compatible handset with Android Version 5 (Lollipop) or above, and a Micro USB to USB data cable.

Step 2

Check that the following services are set to 'ON' on your handset:

Location services: Settings > Location; Location switch ON.

Step 3

Download the Android Auto app to your handset from Google Play.

Step 4

Connect your handset to the SDA by plugging your handset into the vehicle's USB port using a compatible cable.

Before attempting any of these procedures, ensure that your vehicle is stationary.

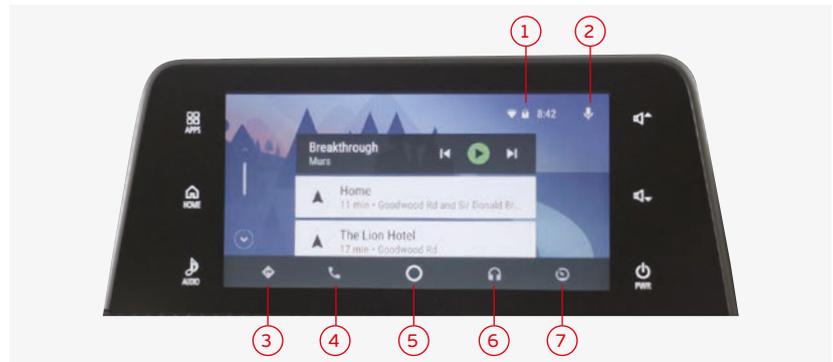

Bluetooth Connection

Android Auto uses both a cable connection and a Bluetooth connection at the same time. The cable connection allows access to Android Auto to enable the use of maps and apps, while the Bluetooth connection is utilised for the making and receiving of phone calls and streaming music. If the cable is disconnected, Android Auto will no longer operate, however, a Bluetooth connection will still be established.

Accessing Android Auto

To activate Android Auto, touch the Android Auto icon on the SDA once you have connected your handset.

- 1 Time, phone battery and signal strength
- 2 Google Voice control
- 3 Navigation
- 4 Phone
- 5 Back to Android Auto home screen
- 6 Music
- 7 Other apps and features

Compatible Handsets

To ensure that you are able to easily connect your handset to the SDA, please check the compatibility of your handset and the software.

| | Handset | Software | How to check OS Version |
|---|---|-----------------------|--|
|  | iPhone 5 through to iPhone X | iOS 8 or later | Settings > General > About > Version |
|  | All handsets compatible with Android version 5 (Lollipop) or later. | 5.0 Lollipop or later | Setting > About Device > Software info |

Sending and Receiving Text Messages

Android Auto

Send a text message

1. Press and hold your car's voice command button for 1-2 seconds or select the microphone on the display.
2. Say "text" or "send a text to" and then a contact name or phone number. For example: "Text <name>" or "Send a text to <phone number>"
3. Android Auto will ask you to say your message.
4. Android Auto will then repeat your message and confirm that you'd like to send it. If you want to send the message say "send." If you want to cancel the message just say "cancel."

You can also say "send it" or "yes" to send the message or "change the message" to correct it.

Receive a text message

When you receive a text message, it will appear as a notification on the home screen, or as a temporary notification at the top of your screen if you're in an app.

To hear your text spoken through the car's speakers, select the notification.

If you dismissed the text notification, you can see the notification on the Home screen.

Apple CarPlay

Send a text message

1. Press and hold your car's voice command button or the Home button on the display for 1-2 seconds.
2. Say "text" or "send a text to" and then a contact name or phone number. For example: "Text <name>" or "Send a text to <phone number>"
3. Siri will ask you to say your message.
4. Siri will then repeat your message and confirm that you'd like to send it. If you want to send the message, select or say "continue". If you want to cancel the message just select or say "cancel."

Receive a text message

When you receive a text message it'll appear as a notification at the top of your screen and as a temporary notification and on the Messages icon on the home screen.

Select the notification or messages icon and Siri will read the message out to you.

Using the Touchpad Controller

Located next to the shift knob on the centre console, the Touchpad Controller offers the convenient, simple and intuitive operation of the SDA without having to move your body position or reach for the screen while the car is on the move.

You can operate basic functions of the SDA unit and Apple CarPlay using the Touchpad Controller. Android Auto cannot be operated using the Touchpad Controller.

To adjust the volume

Slide two fingers vertically

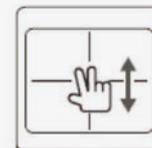

You can adjust the volume for the following situations

While listening to a source 

During a call 

During voice guidance 

While receiving Traffic Information 

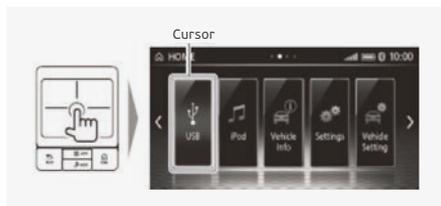

To select and confirm

Operate as follows to select an item and confirm your selection

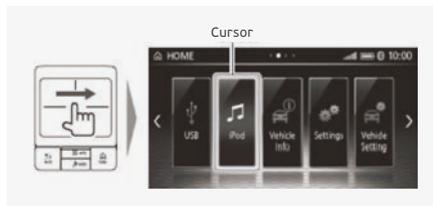

1. Display the cursor

Touch the touchpad. The cursor indicates the item to be selected will be displayed on the screen.

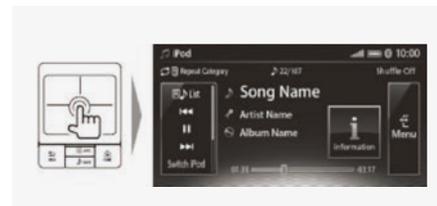

2. Select an item

Swipe on the touchpad to move the cursor over the item to select.

3. Confirm your selection

While the item is selected, press the touchpad.

Using the Touchpad Controller cont.

To select and hold

Press and hold the touchpad while an item is selected.

On some screens, holding an item allows you to perform another operation such as customising the menu of the **HOME** screen.

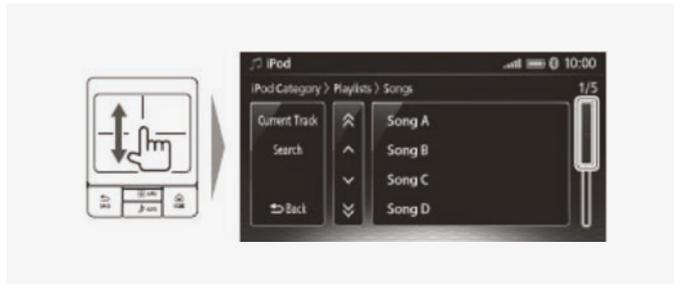

To change the page

Swipe your finger horizontally to change the page.

To scroll the list

While selecting the slide bar, slide your finger vertically.

On the **HOME** screen you can change the page by sliding two fingers horizontally.

Accessing the On-board Tutorial

To learn more you can access tutorials about the Touchpad Controller operations. Press **HOME** > Select **Tutorial** to access the following tutorials.

Select & Confirm

Displays the tutorial which describes how to select and confirm an item using the touchpad controller

Vol.Ctrl

Displays the tutorial which describes how to change the audio volume using the touchpad controller

Audio Off

Displays the tutorial which describes how to turn off audio using the buttons on the steering wheel

Page Nav.

Displays the tutorial which describes how to change the page using the touchpad controller

Radio Seek

Displays the tutorial which describes how to seek channels using the touchpad controller

Track Skip

Displays the tutorial which describes how to play next/ previous track using the touchpad controller

Icon Order

Displays the tutorial which describes how to change the order of menu items on the Home screen

Tap Op

Displays the tutorial which describes tap operations

Frequently Asked Questions

Can I use my phone for other actions while Smartphone Link Display Audio is running?

While Android Auto is running, the screen on your phone will be locked. If you need to use your phone for an action you can't control through Android Auto, you will need to unplug the phone from the USB cable. For your safety, do not use your phone for actions you can't control through Android Auto while you're driving.

How many devices can be connected via Bluetooth at the same time?

The system can pair with up to 5 devices.

What SDA features are available when using a phone which does not support the latest Android or iOS operating systems?

Hands-free phone calls and music via Bluetooth, playing contents stored in an iPod, or USB/HDMI/AUX are all possible with a compatible phone.

What issues may arise when my phone reception is poor?

As voice recognition is processed by a Google/Apple server, voice recognition will not work if your mobile reception is poor. In addition, when the signal is lost, map data for navigation will not be downloaded.

Can I use the navigation feature when I am outside of my carrier's mobile data coverage area?

Some map data is buffered, so as long as the buffered map data is available, you will be able to continue using the navigation feature. While outside of the coverage area, updated map data and new or recalculated routes will be unavailable.

Frequently Asked Questions cont.

Does SDA include navigation feature?

Although SDA is not equipped with its own navigation system, you can use the navigation system running on CarPlay or Android Auto when connected to your smartphone. The Android Auto and CarPlay navigation systems are easy to use compared with traditional navigation systems and portable navigation devices, and map data and traffic information is constantly updated.

Does SDA have a CD drive? Can I listen music from a CD?

As there is no CD drive in the SDA unit, you will not be able to play music from a CD. You will be able to play music stored in your smartphone via the streaming music feature through Android Auto or CarPlay. You can also play music using an iPod, USB memory stick or a Bluetooth audio device.

Is it possible to install SDA in other vehicle's dashboard?

No. At this time, the SDA unit is only available as a factory fitted feature.

How much data is needed to listen to streamed music for 30 minutes?

It depends on the selected quality or sampling rate of the music file. A music streaming service at low quality will typically stream at a rate of 64 kbit/s. Listening to 30 minutes of online audio at this quality would use 14.4Mb of data. Listening at higher quality levels such as 320 kbit/s would increase the amount of data used in 30 minutes to 57.6Mb.

Check your mobile data plan to see how much data allowance you have and clarify the costs if excess data occurs.

Does Mitsubishi Motors collect any information through AA/CP?

No. Mitsubishi Motors does not obtain any information through AndroidAuto or CarPlay.

Smartphone Link Display Audio - Menu

1) Phone

Hands-free phone system is enabled when the mobile phone is connected to the product by Bluetooth.

2) Multimedia

Allows playback using radio or various other media.

3) Navigation¹

Allows use of Navigation function.

4) Info/PHEV & Info²

Allows you to check information regarding this product and PHEV.

5) Icon

Displays connection of Bluetooth/USB memory and battery, signal, and connection of your mobile phone.

6) Clock

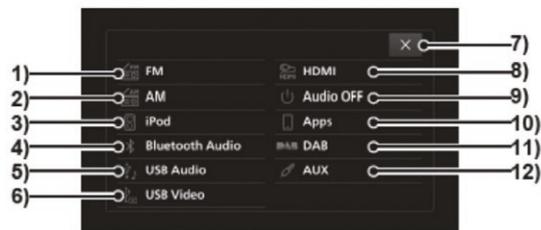

Displays the current time in a 24-hour or 12-hour system.

7) Settings

Allows access to various device settings.

8) Apps³

If Apple CarPlay is connected, this changes to Apple CarPlay, which can be tapped to display Apple CarPlay screen. If Android Auto is connected, this changes to Android Auto, which can be tapped to display Android Auto screen.

1) FM

Displays the FM radio broadcast information screen.

2) AM

Displays the AM radio broadcast information screen.

3) iPod¹

Displays the iPod audio playback information screen.

4) Bluetooth Audio²

Displays the Bluetooth Audio playback information screen.

5) USB Audio

Displays the USB Audio playback information screen.

6) USB Video

Displays the USB Video playback information screen.

7) X

Closes the Multimedia Menu.

8) HDMI^{3,4}

Displays the HDMI screen.

9) Audio OFF

Switches OFF the Audio function.

10) Apps⁵

If Apple CarPlay is connected, this changes to Apple CarPlay, which can be tapped to display Apple CarPlay screen. If Android Auto is connected, this changes to Android Auto, which can be tapped to display Android Auto screen.

11) DAB

Displays the DAB (Digital Audio Broadcast) broadcast information.

12) AUX³

Outputs the sound of the rear entertainment system.

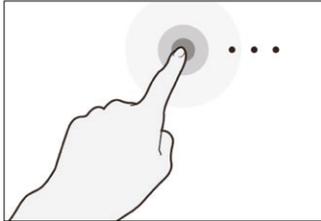

¹Equipment by type. ²[Info] is displayed for petrol vehicles and [PHEV & Info] is displayed for plug-in hybrid vehicles. ³If an Apple CarPlay or Android Auto capable smartphone has never been connected, the button won't be displayed.

¹The iPhone/iPod must be connected to the product by a USB cable. ²A bluetooth capable audio device must be connected to the product via Bluetooth. ³Equipment by type. ⁴An Aux Audio Output device must be connected to the product with an HDMI cable. ⁵An Apple CarPlay or Android Auto capable smartphone must be connected to the product by a USB cable. An Apple CarPlay or Android Auto capable smartphone has never been connected, the button won't be displayed.

Screen Gestures

How to Operate

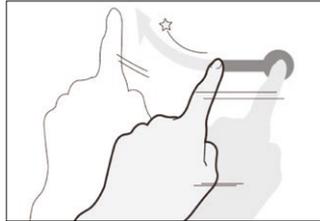

This system uses a multi-touch panel, which allows operations by touching the display directly.

Long press

Can be used for various operations such as fast forwarding or rewinding.

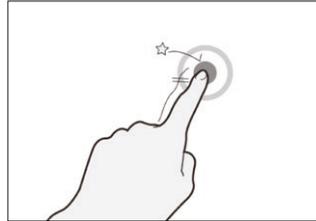

Keep the finger on the screen till you complete the desired action.

Flick

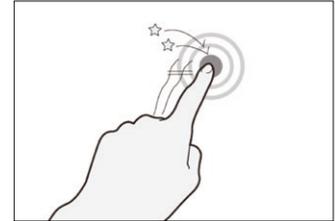

Use for quickly scrolling through the list and map.

Keep your finger on the screen, then move and release it quickly using a flicking motion.

Tap

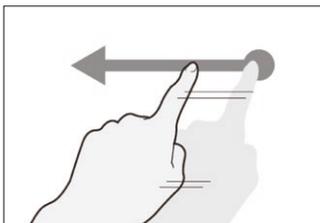

Used for "Enter" operations, etc
Touch the screen gently for just a moment.

Double tap

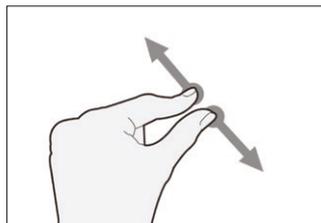

Use for zooming into the map step by step.

Two quick taps with one finger.

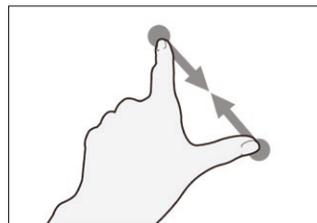

Slide

Sliding action of the finger for scrolling through the screen in sync with the finger movements. Touch and slide the screen by using your finger.

Pinch out

Use for zooming in the map. Place your two fingers on the screen and move them away from each other while they are still touching the screen.

Pinch in

Use for zooming out the map to get a larger view. Place your two fingers on the screen and bring them closer while they are still touching the screen.

Caution: To prevent the surface of the display from developing scratches, handle it gently and use a soft cloth to wipe it. If the screen becomes dirty, wipe it with a soft, dry cloth such as the one used for cleaning spectacles.

Apple CarPlay

Available on selected cars, CarPlay is a smarter, safer way to use your iPhone in the car. CarPlay takes the things you want to do with your iPhone while driving and puts them right there on your car's built-in display.

You can get directions, make calls, send and receive messages, and listen to music, all in a way that allows you to stay focused on the road. Just plug in your compatible iPhone and go!

Apple CarPlay

Apple Maps

Complete with turn-by-turn directions, traffic conditions and estimated travel time.

Apple Maps can also predict where the user is most likely to want to go using addresses from their email, text messages, contacts and calendar.

Music

All your Music is beautifully arranged. Access your songs, artists, playlists and iTunes Radio using your vehicles built-in controls.

Or just tell Siri what you'd like to listen to.

Car play will also support additional audio apps that you've downloaded to your iPhone for enjoying podcasts, music and radio.

Phone

The road is calling. Make calls, return missed calls and listen to voicemail.

Siri helps do all these things.

Siri Voice Recognition

Siri is part of Apple Incorporated iOS which works as an intelligent personal assistant and knowledge navigator.

Siri uses a natural language user interface to answer questions, make recommendations and perform voice command actions.

Voice Command "Hey Siri"

Messages

Reading and writing is now listening and dictating. Siri can send, read and reply to your text messages for you so you'll never have to look at your phone while driving.

Other Apps

Bring more apps along for the ride. CarPlay supports other apps on your phone*.

Additional apps will be made CarPlay compatible and made available over time.

Current apps available include Podcasts, Audiobooks, Spotify, Stitcher and iHeartRadio.

*Some apps may not be available with CarPlay in Australia.

Connecting your iPhone to Apple CarPlay

Before attempting any of the procedures below, ensure that your vehicle is stationary.

Step 1:

Check that you have all of the right equipment; a compatible iPhone with iOS 8 or above, and a genuine Apple Lightning to USB cable.

Step 2:

Check that the following services are set to 'ON' on your iPhone:

Location services: Settings > Privacy > Location Services > Location Services switch ON

Siri Enabled: Settings > General > Siri > Siri switch ON

Step 3:

Connecting to the SDA is then as simple as plugging your handset into the vehicle's USB port via the genuine Apple Lightning cable.

When connecting your iPhone to the SDA, you will need to unlock the iPhone screen to access the system.

CarPlay screen with iOS version 13 and above

Accessing Apple CarPlay

To launch Apple CarPlay, touch the Apple CarPlay icon on the SDA once you have connected your iPhone.

- 1 Clock & signal strength
- 2 Recent app shortcuts
- 3 Dual pane mode

Apple Lightning to USB cable

Introducing Android Auto

Android Auto is an app that integrates with your car to make it easier for you to use some of the main features of your Android phone while driving.

You can control navigation, music, and your phone's dialler from your car's digital display so you can stay focused on the road.

Google Maps

Google Maps will lead the way. It's easy to get where you're going with voice-guided navigation, live traffic information, lane guidance and more.

Google Play Music

With Android Auto you can access Google Play Music. With on-demand access to 30 million songs, Google Play Music allows you to stream music on the road and anywhere else you want to listen.

Phone

You can make phone calls with voice commands while keeping your hands on the wheel.

There's no need to touch your phone.

Google Voice Search

Make phone calls or send and receive messages with voice commands while keeping your hands on the wheel.

Voice command "Ok Google"

Messages

You can send and receive messages while keeping your hands on the wheel. There's no need to touch your phone

Other Apps

Android Auto makes it easy to access your favourite apps and content in the vehicle*.

For more applicable apps for Android Auto go to g.co/androidauto

*Some apps may not be available with Android Auto in Australia

Connecting your Handset to Android Auto

Before attempting any of the procedures below, ensure that your vehicle is stationary.

Step 1

Check that you have all of the right equipment; a compatible handset with Android Version 5 (Lollipop) or above, and a Micro USB to USB data cable.

Step 2

Check that the following services are set to 'ON' on your handset:

Location services: Settings > Location > Location switch ON

Step 3

Download the Android Auto app to your phone on Google Play or simply plug your phone into a compatible car and you'll be prompted to download the app.

Before using Android Auto, make sure that your Android phone has a data plan.

Most features of Android Auto require data usage so it's important that you're familiar with your plan and its data limits to avoid unexpected charges from your mobile provider.

Connect your handset

You'll need a USB cable to connect your phone to the car. Your phone may also prompt you to update apps like Google Maps the first time you connect.

Step 1

Unlock your phone's screen.

Step 2

Connect one end of the USB cable to your phone and the other to your compatible car's USB port.

Step 3

Review the Terms & Conditions on your phone (only required the first time you use the app).

Allow access to Bluetooth and Notifications

Android Auto uses Bluetooth to send and receive phone calls. It uses notifications to show you things like turn-by-turn navigation, calendar events, incoming calls and messages, and your music on your car's screen.

Start Android Auto

To activate Android Auto, touch the Android Auto icon on the vehicle's screen.

Accessing Android Auto

To activate Android Auto, touch the Android Auto icon on the SDA once you have connected your handset.

- 1 Time
- 2 Phone battery and signal strength
- 3 Google Voice control
- 4 Scroll up & down
- 5 Phone
- 6 Back to Android Auto home screen
- 7 Music apps (where installed)
- 8 Music controls

Compatible Handsets

To ensure that you are able to easily connect your handset to the SDA, please check the compatibility of your handset and the software.

| | Handset | Software | How to check OS Version |
|--|---|-----------------------|--|
|  Apple CarPlay | iPhone 5 or later | iOS 8 or later | Settings > General > About > Version |
|  Android Auto | All handsets compatible with Android version 5 (Lollipop) or later. | 5.0 Lollipop or later | Setting > About Device > Software info |

Google Maps and Waze

Previously, Google Maps was only compatible with Android Auto, and the only map system available to Apple CarPlay users was Apple Maps. However, from September 2018, Apple's iOS 12 update now allows CarPlay to support both Google Maps and Waze.

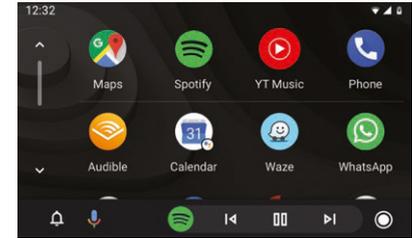

Access to these map applications may provide additional benefits to our customers, including the following key features:

Google Maps

- Comprehensive map database with relevant and timely updates
- Ability to download maps into your handset for use in areas where data is not accessible
- Traffic density indications (via colour coding)
- Satellite view

Waze

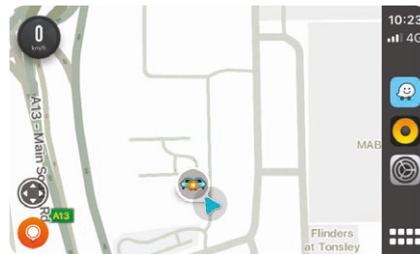

- Community based traffic navigation
- Real-time help from other drivers
- Time/energy efficient routes, avoiding heavy traffic or incidents
- Speed indicators with overspeed warnings (where available)

Android home screen with Google Maps and Waze installed

Google Maps Satellite View (CarPlay)

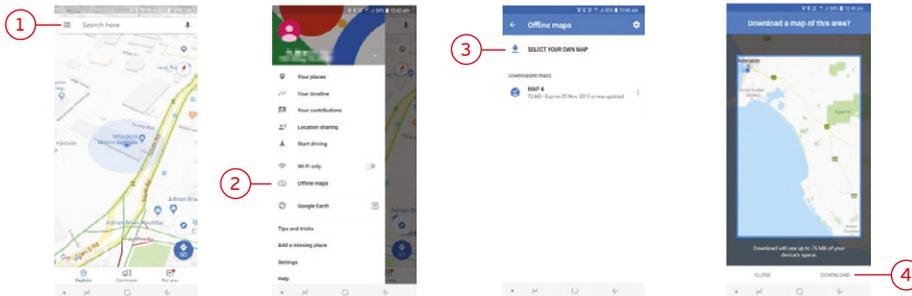

Waze (CarPlay)

Google Maps

Some competitor audio units currently in the market support a satellite navigation system with integrated (or stored) maps. The benefit of this format is that the unit can provide directions without the need for a data enable handset to be connected to provide the map information. However, having the maps stored in the unit often results in out-of-date map data which may lead to a frustrating driving experience when directions are incorrect, or roads and highways are added or changed. The benefit of 'live' map data is that your map directions will always be up-to-date, and may also include information such as live traffic updates, incident alerts and hazard avoidance.

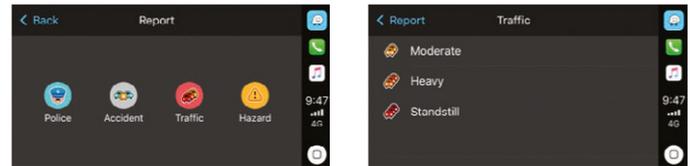

Our SDA unit supports Google Maps via CarPlay and Android Auto. A benefit with Google Maps is it allows for map files to be downloaded and stored in to your handset. This option the can provide the user with access to maps without data being active or in locations where data is not available.

Steps 1-4 below show the 'offline maps' process:

Waze

Waze operates as a conventional satellite navigation system which requires access to mobile data to show accurate road systems as well as live traffic updates and incident alerts. A key benefit of Waze is that it also allows for users (or Wazers) to input information such as congested traffic, road accidents and other hazards which in turn is then visible to other nearby Wazers. This provides real time driving information to assist users to avoid these types of traffic issues, and may in turn provide a better driving experience while potentially reducing journey time.

Waze report screens (CarPlay)

Map Update Process

Updating your vehicle's map is a simple process. Use the following link to download the latest updates:

<https://mitsubishi.sda.navshop.com/downloads>

Downloading updates

Select your model and region from the available content and download the relevant update for your vehicle.

- 1 Select Model
- 2 Select Region
- 3 Click Search for updates
- 4 Click Download on relevant map

The screenshot displays the Mitsubishi SDA navigation system update process. At the top, there are navigation links for 'HOME' and 'HELP', and a language selector set to 'English'. The main header features the Mitsubishi Motors logo and the text 'Smartphone-link Display Audio (SDA) navigation system'. Below the header, there is a section titled 'Get The Latest Available Map' with two dropdown menus for 'Select Model' and 'Select Region', and a blue 'Search for updates' button. The page is divided into three main sections: 'STEP1 DOWNLOAD', 'STEP2 TRANSFER', and 'STEP3'. The 'STEP1 DOWNLOAD' section includes a download icon and instructions: 'Choose from the available content and click the download button. Always make sure to have the correct vehicle or system selected.' The 'STEP2 TRANSFER' section includes a transfer icon and instructions: 'Copy and extract the content package to your personal carrier (USB) and plug it into your in-car navigation system.' The 'STEP3' section is partially visible. A 'My downloads' panel is open on the right, showing a map update for 'Oceania' (1020 MB) with a 'Download' button. Red circles and lines indicate the steps: 1 points to the 'Select Model' dropdown, 2 points to the 'Select Region' dropdown, 3 points to the 'Search for updates' button, and 4 points to the 'Download' button in the 'My downloads' panel.

Transfer

Extract the files from the downloaded zip folder. Transfer the map package onto a USB flash drive. USB flash drive capacity must be greater than 1GB and formatted for FAT32.

Install

Insert the USB flash drive into your vehicle's standard USB port, the system will then automatically install the new content. "Upgrade Result: Pass!" is displayed after the map update is completed.

USB flash drive inserted

Update successful

Frequently Asked Questions

Can I use my phone for other actions while Smartphone Link Display Audio is running?

While Android Auto is running, the screen on your phone will be locked. If you need to use your phone for an action you can't control through Android Auto, you will need to unplug the phone from the USB cable. For your safety, do not use your phone for actions you can't control through Android Auto while you're driving.

Can I use the navigation feature when I am outside of my carrier's mobile data coverage area?

Some map data is buffered, so as long as the buffered map data is available, you will be able to continue using the navigation feature. While outside of the coverage area, updated map data and new or recalculated routes will be unavailable. Google Maps provides the ability to download maps into your handset for use offline.

What SDA features are available when using a phone which does not support the latest Android or iOS operating systems?

Hands-free phone calls and music via Bluetooth, playing contents stored in an iPod, or USB/HDMI/AUX are all possible with a compatible phone.

What issues may arise when my phone reception is poor?

As voice recognition is processed by a Google/Apple server, voice recognition will not work if your mobile reception is poor. In addition, when the signal is lost, map data for navigation will not be downloaded.

How many devices can be connected via Bluetooth at the same time?

The system can pair with up to 5 devices.

How do I send a text?

Android Auto

1. Press and hold your car's voice command button for 1-2 seconds or select the microphone on the display.
2. Say "text" or "send a text to" and then a contact name or phone number. For example: "Text <name>" or "Send a text to <phone number>"
3. Android Auto will ask you to say your message.
4. Android Auto will then repeat your message and confirm that you'd like to send it. If you want to send the message say "send." If you want to cancel the message just say "cancel."

Note: You can also say "send it" or "yes" to send the message or "change the message" to correct it.

Apple Car Play

1. Press and hold your car's voice command button or the Home button on the display for 1-2 seconds.
2. Say "text" or "send a text to" and then a contact name or phone number. For example: "Text <name>" or "Send a text to <phone number>"
3. Siri will ask you to say your message.
4. Siri will then repeat your message and confirm that you'd like to send it. If you want to send the message, select or say "continue". If you want to cancel the message just select or say "cancel."

Frequently Asked Questions (cont)

How can I read a received text?

Android Auto

When you receive a text message, it will appear as a notification on the home screen, or as a temporary notification at the top of your screen if you're in an app.

To hear your text spoken through the car's speakers, select the notification.

If you dismissed the text notification, you can see the notification on the Home screen.

CarPlay

When you receive a text message it'll appear as a notification at the top of your screen and as a temporary notification and on the Messages icon on the home screen.

Select the notification or messages icon and Siri will read the message out to you."

Is it possible to install SDA in other vehicle's dashboard?

No. At this time, the SDA unit is only available as a factory fitted system.

Does SDA include navigation feature?

Although SDA is not equipped with its own navigation system, you can use the navigation system running on CarPlay or Android Auto when connected to your smartphone. The AndroidAuto and CarPlay navigation systems are easy to use compared with traditional navigation systems and portable navigation devices, and map data and traffic information is constantly updated.

Does SDA have a CD drive? Can I listen music from a CD?

As there is no CD drive in the SDA unit, you will not be able to play music from a CD. You will be able to play music stored in your smartphone via the streaming music feature through AndroidAuto or CarPlay. You can also play music using an iPod, USB memory stick or a Bluetooth audio device.

How much data is needed to listen to streamed music for 30 minutes?

It depends on the selected quality or sampling rate of the music file. A music streaming service at low quality will typically stream at a rate of 64 kbit/s. Listening to 30 minutes of online audio at this quality would use 14.4Mb of data. Listening at higher quality levels such as 320 kbit/s would increase the amount of data used in 30 minutes to 57.6Mb. Check your mobile data plan to see how much data allowance you have and clarify the costs if excess data occurs.

Does Mitsubishi Motors collect any information through AA/CP?

No. Mitsubishi Motors does not obtain any information through AndroidAuto or CarPlay.
